

! Note !

- During subsequent assembly, ensure that the motorbike stands securely and secure it against rolling away or tipping over.
- When using the side number plate holder, it is necessary to remove the motorbike's original lighting. This must be replaced with a suitable item (e.g. HD-SPS020).

Dismantling original parts

1. The bracket including lights and number plate holder is removed by loosening the 3 screws on the left side of the swing arm.
2. the wiring is plugged in between the motor and the rear wheel and can also be unplugged there.

Mounting licence plate holder

1. The side licence plate holder from Cult-Werk is mounted on the upper of the 3 fastening points. To do this, simply place the licence plate holder on the outside of the mounting point and fix it in place using the cylinder head screw M8x40 and an M8 hexagon nut.
(fixing material included in the scope of delivery)
Recommended tightening torque: approx. 25Nm

We recommend using a medium-strength screw lock (e.g. LOCTITE 243, blue) for the screw.

1. the wiring of the number plate lighting must be carried out professionally
